Calculus (from Latin calculus, literally 'small pebble', used for counting and calculations, as on an abacus) is the mathematical study of continuous change, in the same way that geometry is the study of shape and algebra is the study of generalizations of arithmetic operations.. It has two major branches, differential calculus (concerning instantaneous rates of change and slopes of curves ...

The directional derivative of a scalar function $f(x, y, z)$ along a vector $\mathbf{u} = (u_x, u_y, u_z)$ is the function $\nabla f \cdot \mathbf{u}$ defined by the limit $\nabla f \cdot \mathbf{u} = \lim_{h \rightarrow 0} \frac{f(x + hu_x, y + hu_y, z + hu_z) - f(x, y, z)}{h}$. This definition is valid in a broad range of contexts, for example where the norm of a vector (and hence a unit vector) is undefined.. If the function f is differentiable

at x , then the directional derivative exists along any vector v , and one has
