The class of Sudoku puzzles consists of a partially completed row-column grid of cells partitioned into  $N$  regions each of size  $N$  cells, to be filled in ("solved") using a prescribed set of  $N$  distinct symbols (typically the numbers  $\{1, \dots, N\}$ ), so that each row, column and region contains exactly one of each element of the set. The properties of Sudoku puzzles and their solutions can be ...

Distributions are a class of linear functionals that map a set of test functions (conventional and well-behaved functions) into the set of real numbers. In the simplest case, the set of test functions considered is  $D(\mathbb{R})$ , which is the set of functions  $\varphi : \mathbb{R} \rightarrow \mathbb{R}$  having two properties:  $\varphi$  is smooth (infinitely differentiable);  $\varphi$  has compact support (is identically zero outside some bounded ...
