

The J Curve A New

In economics, the 'J curve' is the time path of a country's trade balance following a devaluation or depreciation of its currency, under a certain set of assumptions. A devalued currency means imports are more expensive, and on the assumption that the volumes of imports and exports change little at first, this causes a fall in the current account (a bigger deficit or smaller surplus).

An algebraic curve over a field K is an equation $f(X,Y)=0$, where $f(X,Y)$ is a polynomial in X and Y with coefficients in K . A nonsingular algebraic curve is an algebraic curve over K which has no singular points over K . A point on an algebraic curve is simply a solution of the equation of the curve. A K -rational point is a point (X,Y) on the curve, where X and Y are in the field K .
